Email Setup on Phones and Tablets

There are many brands of phones and tablets; and many email apps. If the procedure for adding a new email account on a device is not intuitive, search the Internet for instructions.

Use the following data to set up an email account (some apps find data automatically, so only some data is needed in such cases).

We do not recommend POP accounts—some devices no longer support POP accounts for security reasons.

Setup Data for Fast-Air Email Accounts

This data is for email addresses ending with `@fast-air.net`.

Be sure to enter the exact <u>email address</u> and <u>password</u>.

- **Account type**: `IMAP`
- **Incoming Server**:
    - Incoming Server name: `mail.fast-air.net`
    - Port: `143`
    - Security: `STARTTLS`
    - Authentication: `Password` (normal or plain text)
    - Username: The username is the <u>full email address</u> (e.g., `jsmith@fast-air.net`).
- **Outgoing Server**
    - Outgoing Server name: `mail.fast-air.net`
    - SMTP Port: `587`
    - Security: `STARTTLS`
    - Authentication: `Password` (normal or plain text)
    - Username: The username is the <u>full email address</u> (e.g., `jsmith@fast-air.net`).
